SUMMARY

Full-stack-leaning backend engineer (final-year CS undergrad) who builds and ships **TypeScript/Node.js** services, relational database schemas, and production features end to end. Two backend internships covering REST API design, transactional data modelling (PostgreSQL/Supabase), scheduled jobs, CI/CD and secure coding (OWASP). Fast, AI-assisted builder (Claude Code, Antigravity) who takes ownership in startup-paced environments.

EXPERIENCE

RideAbit

Apr 2026 - May 2026

Backend Developer Intern (SDE Intern) | rideabit.com

Remote, India

- Engineered secure REST-style backend services in **TypeScript** (Next.js Server Actions) on Supabase/PostgreSQL for a ride-sharing platform, following OWASP standards to protect user balances and transactional data
- Designed the relational schema for the platform's coin/rewards economy, including a **user_coin_balances** table and an append-only **coin_transactions** ledger for data integrity and auditability
- Found and closed an exploit loop in the reward lifecycle where discount refunds on ride cancellation could be farmed, via defensive business logic on the server
- Replaced an external worker queue with native **pg_cron** jobs that calculate, evaluate and distribute reward cycles inside PostgreSQL, removing a moving part from the stack

Happiest Minds Technologies

Jun 2025 - Jul 2025

AI/ML & Product Engineering Intern | happiestminds.com

Bangalore, India

- Built Java Spring Boot REST APIs and a PostgreSQL schema for **Enginuity 360**, a smart engineering dashboard with a React frontend
- Implemented Spring Batch jobs for automated GitHub data ingestion via third-party REST APIs and JSON payloads, and orchestrated OpenCost API workflows with Apache Airflow
- Integrated Jenkins and SonarQube into the CI/CD pipeline with Git-based version control; containerised services with Docker
- Worked in an Agile team on debugging, code review and cross-functional feature delivery

PROJECTS

DevPilot MCP - AI Developer Workflow Server

Live | [GitHub](#) | [npm](#)

TypeScript, Node.js, Express, MCP SDK v2, GitHub REST API, Docker, Render

- Built a **Node.js/TypeScript** MCP server exposing 6 tools (issue retrieval, issue analysis, codebase search, docs retrieval, test execution, test-failure summarisation) that let Claude Code work against GitHub repos and local environments
- Integrated the GitHub REST API with scoped, task-specific access; benchmarked against manual context-gathering and cut developer context-gathering time by 60-75%
- Deployed as a public **Streamable HTTP** service (Docker on Render) with auth, rate limiting and a sandboxed test runner (repo allowlist, fixed commands, timeouts, sanitized env); also published to npm for local use via npx

AI-Driven CRM Sales Intelligence System

Live | [GitHub](#)

Python, FastAPI, Redis Streams, XGBoost, ONNX (LSTM), SHAP, Next.js, MySQL, Docker

- Designed a five-layer real-time pipeline ingesting CRM data via REST APIs, webhooks and Redis Streams, with Redis caching for **180 ms** single-deal inference latency (XGBoost 0.92 AUC-ROC; LSTM 4.2-day MAE)
- 90-day pilot (1,840 automated actions) cut sales cycles by 6.2 days and raised win rate from 57% to 72%

ClinDocMicro - Offline Clinical Document Microservice

Python, FastAPI, Docker, Llama.cpp (Phi-3-Mini), PaddleOCR

- Co-built a containerised FastAPI REST microservice (FHIR R4-compatible) running fully offline on 4-core/8GB CPU hardware
- Local 4-bit Phi-3-Mini with XML-schema constrained decoding cut hallucination rate from 14.7% to 2.1%; clinical entity extraction F1 0.887; chart-review time down 71.2% across 200 records

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, Java, C++, C, SQL

Frameworks & Backend: FastAPI, Spring Boot, Express, React, Next.js (Server Actions), React Native

Databases: PostgreSQL, Supabase, MySQL, Redis, Apache Kafka, Redis Streams, Alembic

AI & ML: XGBoost, LSTM, SHAP (Explainable AI), ONNX Runtime, Scikit-learn, OpenCV, NumPy, Pandas, TF-IDF, NLTK

Cloud & DevOps: Docker, Docker Compose, Kubernetes, Jenkins, SonarQube, Vercel, Render, OpenShift, Podman

Data & Streams: Apache Airflow, Spring Batch, pg_cron, Server-Sent Events, Webhooks, Upstash

Practices: REST APIs, OWASP secure development, defensive programming, Agile, CI/CD, GitHub

CERTIFICATIONS & ACTIVITIES

- SAP Certified Generative AI Developer; Introduction to Databases (Meta); Red Hat OpenShift Development I (Containers with Podman); MathWorks AI & Deep Learning Techniques, Machine Learning Onramp; Cisco Networking Basics
- Team Lead, AI/ML Track - DAYZERO Hackathon:** led a team building a sentiment-analysis backend (Pandas preprocessing, scikit-learn logistic regression, F1 evaluation)
- Member, Centinels Cyber Security Club, SRM IST (since Nov 2024)
