EDUCATION

Year	Degree/Certificate	Institute	CGPA/Percentage
2023-2027 (Expected)	B.Tech Computer Science & Engineering (AI & ML)	SRM Institute of Science and Technology, Chennai	8.45/10.0

EXPERIENCE

- RideAbit** April 2026 - May 2026
Backend Developer Intern (SDE Intern) Remote, India
 - Engineered secure backend systems for a ridesharing platform using Next.js (Server Actions) and Supabase/PostgreSQL, following OWASP standards to safeguard user balances and transactional data
 - Designed and maintained the relational database architecture for the platform's coin/rewards economy, including `user_coin_balances` and a `coin_transactions` ledger tracking credit/debit history
 - Implemented defensive business logic for the reward lifecycle, enforcing that coins applied as ride discounts are permanently consumed with no refunds on cancellation, closing a potential exploit loop
 - Replaced the need for an external worker queue (e.g. BullMQ) by implementing Supabase `pg_cron` jobs to natively calculate, evaluate, and distribute reward cycles inside PostgreSQL
 - Engineered the referral lifecycle processing logic and restructured the onboarding flow, moving referral code application from the high-friction OTP verification step to the profile tab to smooth the sign-up funnel
- Happiest Minds Technologies** Jun 2025 - Jul 2025
AI/ML & Product Engineering Intern Bangalore, India
 - Developed and integrated Spring Boot REST APIs and PostgreSQL schema for Enginuity 360, a Smart Engineering Dashboard powering data-driven AI insights
 - Implemented Spring Batch jobs for automated GitHub data ingestion via REST APIs, optimizing data pipeline performance and scalability
 - Utilized Apache Airflow to orchestrate OpenCost API workflows, ensuring clean and reliable backend data for React-based AI visualizations
 - Integrated DevOps tools including Jenkins and SonarQube to streamline CI/CD operations and improve code quality
 - Collaborated within an Agile team of senior engineers and cross-functional stakeholders to deliver scalable backend features on schedule

PROJECTS

- Mental Health Insight**
Python, Machine Learning, Sentiment Analysis, TF-IDF, NLTK
 - Built a Natural Language Processing pipeline using TF-IDF vectorization and NLTK-style lexicons to perform sentiment analysis on mental health text data
 - Trained and evaluated a logistic regression classifier using scikit-learn; assessed model performance using F1 score and accuracy metrics
 - Preprocessed and cleaned raw CSV datasets with Pandas, handling missing values and feature engineering for improved model accuracy
- Machine Learning Facial Age & Gender Prediction**
Deep Learning, OpenCV, Image Processing
 - Developed a deep learning model to classify facial attributes (age and gender) using OpenCV for real-time image capture and preprocessing
 - Applied convolutional neural network techniques and image augmentation to improve model generalization and prediction accuracy
- Enginuity 360 – Smart Engineering Dashboard**
Java, Spring Boot, PostgreSQL, ReactJS, Docker, Apache Airflow
 - Built scalable backend services with Spring Boot and PostgreSQL to support AI-driven analytics and visualization features
 - Containerized services using Docker and orchestrated data workflows with Apache Airflow for efficient distributed processing
- ClinDocMicro – Offline Clinical Document Intelligence Microservice**
Python, Docker, FastAPI, PaddleOCR, Phi-3-Mini (GGUF), Llama.cpp
 - Co-designed a containerized, privacy-first NLP microservice (6.2GB Docker image) for offline deployment on 4-core/8GB CPU hardware in zero-internet healthcare environments
 - Built a 4-stage OCR pipeline (PaddleOCR, Otsu binarization, Hough deskewing, CLAHE) achieving a weighted F1 of 0.887 on clinical entity extraction, comparable to cloud-hosted BioBERT
 - Orchestrated a local 4-bit quantized Phi-3-Mini LLM via `llama-cpp-python` with strict XML-schema constraints, cutting hallucination rate from 14.7% to 2.1%
 - Delivered a FHIR R4-compatible FastAPI service compliant with the DPDP Act 2023 (no data-at-rest), cutting clinician chart-review time by 71.2% across 200 validated records

- **AI-Driven CRM Sales Intelligence System**

May 2026

Deep Learning, Explainable AI, Agentic Orchestration

- Designed a five-layer real-time pipeline integrating CRM data via REST APIs, webhooks, and Apache Kafka for decoupled ingestion
- Built a dual-model inference engine (XGBoost classifier: 87.3% accuracy, 0.92 AUC-ROC; LSTM regressor: 4.2-day MAE) with Redis caching for 180ms single-deal latency
- Integrated SHAP explainability and an agentic hierarchical decision-tree layer to automate context-aware next-best-action recommendations
- Ran a 90-day pilot (1,840 automated actions), cutting sales cycles by 6.2 days and raising win rates from 57% to 72%; peer-reviewed at ICIDS 2026

- **Programming Languages:** Python, TypeScript, Java, C, C++

- **AI / ML & Data Science:** Machine Learning, Deep Learning, Scikit-learn, TF-IDF, NLTK, OpenCV, NumPy, Pandas, Logistic Regression, Sentiment Analysis, Image Processing, F1 Score Evaluation

- **Backend & Databases:** PostgreSQL, Supabase, SQL, REST APIs, Next.js (Server Actions), Apache Airflow, Spring Batch, pg_cron

- **Cloud & DevOps:** Docker, Jenkins, SonarQube, Red Hat OpenShift, Podman, Spring Boot

- **Security & Practices:** OWASP Standards, Secure Development, Agile, Defensive Programming

- **Frameworks & Tools:** ReactJS, API Integration, Software Development

CERTIFICATIONS

- **SAP Certified - SAP Generative AI Developer**
- **Artificial Intelligence and Deep Learning Techniques** –Mathworks
- **Machine Learning Onramp** – MathWorks
- **Introduction to Databases** – Meta
- **Red Hat OpenShift Development I: Introduction to Containers with Podman**
- **Networking Basics** – Cisco Networking Academy
- **C Programming Bootcamp**

HACKATHONS & COMPETITIONS

- **Team Lead – AI & Machine Learning Track**, DAYZERO Hackathon
 - Led a cross-functional team to build a sentiment analysis backend, coordinating task distribution and fostering collaborative, unbiased contribution
 - Designed the ML pipeline: CSV data loading and preprocessing with Pandas, logistic regression model training with scikit-learn, and performance evaluation using F1 score

POSITIONS OF RESPONSIBILITY

- **Member**, Centinels Cyber Security Club, SRM University Chennai

Nov 2024
